A. EXECUTIVE SUMMARY

The mission of Mt. San Antonio College is to welcome all students and to support them in achieving their personal, educational, and career goals in an environment of academic excellence.

A. EXECUTIVE SUMMARY

Mt San Antonio College (MtSAC) is part of the State of California Community College (CCC) system. It was established in 1946 at the site of a former military hospital. It is the largest single campus district in the system. It has one campus and 2 primary and many other small satellite sites. Current enrollment is approximately 65,000 students. The CCC system has 72 districts, each with state established service areas. Districts enroll students from within and outside of their service area.

The Facilities Master Plan Update 2009 represents the collaborative results of District Facilities Planning and Management staff, District Construction Manager Bovis Lend Lease and architects to develop an overall plan for development of a pedestrian oriented campus with improved quality of open space and clear approach for implementation of built improvements. The plan incorporates previous planning strategies developed for educational master planning and facilities master planning. It provides an updated record of projects recently completed under state and bond funding, including recommendations for new project placement and planning priorities. The intent of the plan is to provide future architects and campus administrators with a meaningful basis for future campus decisions. The Facility Master Plan Update offers both flexibility and structure with an overall campus concept for the built environment, allowing for future changes in program and design specifics.

The master plan task force met between November 2009 and July 2010. Workshops were held with key District program areas to establish large scale site development needs and space projections for evaluating new building zones. Key workshops included Library/LRC, Continuing Education, Athletics, and Agriculture Science.

Previous documents referenced to create this update include the 2002 Educational Master Plan, Master Plan Update 2005, and Master Plan Update 2008.

Campus utility planning efforts and traffic studies are under way by engineering firms as part of other contracts and are not included in this plan.

B. PAST PLANNING EFFORTS

MASTER PLAN UPDATE 2005

Initiated in 2004, the Master Plan Update was completed in July of 2005 by AC Martin Partners, Inc., Community Colleges Services Group, SWA Group, and Meyer Mohaddes Associates Inc. The update reevaluated the previous 2002 Master Plan document to address changes to several of the Measure R projects and overall campus plan. The plan update identified fifteen long term campus projects keyed by number 1 through 15. It recommended a single primary axial pedestrian path from east to west (named "Miracle Mile"), terminating at the tunnel to the athletics zone. A Framework tree and plant species list was recommended according to zones established by use type: Miracle Mile, Courtyards, Cross-Axes, Parking, and Campus Edge. A Sign Plan located directional signs, campus maps, and exterior building signs. An Emergency Access Plan and Universal Access plan were also included.

PROJECT KEY

- 1 South Science Laboratory
- 2 Agricultural Sciences Complex (Main Facility Only)
- 3 Child Development Center / Early Childhood Learning Lab
- 4 Business and Computer Technology Center
- 5 Design Technology Center (includes 400 Person Assembly Space)
- 6 Gymnasium (net new space approx. 10,000 GSF)
- 7 Campus Center
- 8 Music Expansion
- 9 Off-Campus Learning Centers
- 10 Community Education Facility
- 11 North Sciences / Math
- 12 Heritage Hall
- 13 Parking Structure (2,250 spaces)
- 14 Future Class / Lab Building
- 15 Future Class / Lab Building
- * Campus Wide Infrastructure: Grounds, Landscape, Open Space Projects, Circulation System and Transportation Improvements

SITE PLAN UPDATE 2008

The Site Plan Update 2008 was completed by GKK Works. The 2005 Site Plan was reviewed and updated in July 2008. The scope of the update included changing the project list, identification methods and location changes.

2008-2009 EDUCATIONAL MASTER PLAN

In 2008 the District employed a consultant, Grace Mitchell, to work with the Institutional Effectiveness Committee to develop an Educational Master Plan. This project was completed and the final document, the *2008-2009 Educational Master Plan* was accepted by the Board of Trustees. The Educational Master Plan (the Plan) provided much of the information necessary to complete the Site Plan Update 2008 and the Facility Master Plan Update 2009.

C. BOND FUNDING

As part of the California Community College system, the college receives funding from the state for capital projects and operations as administered by the State of California Community Colleges Chancellor's Office (Chancellor) and State of California Department of Finance. Projects projected may be fully bond funded, partially bond funded, or fully state funded.

STATE FUNDING STATEMENT

Text by Gary

MEASURE R

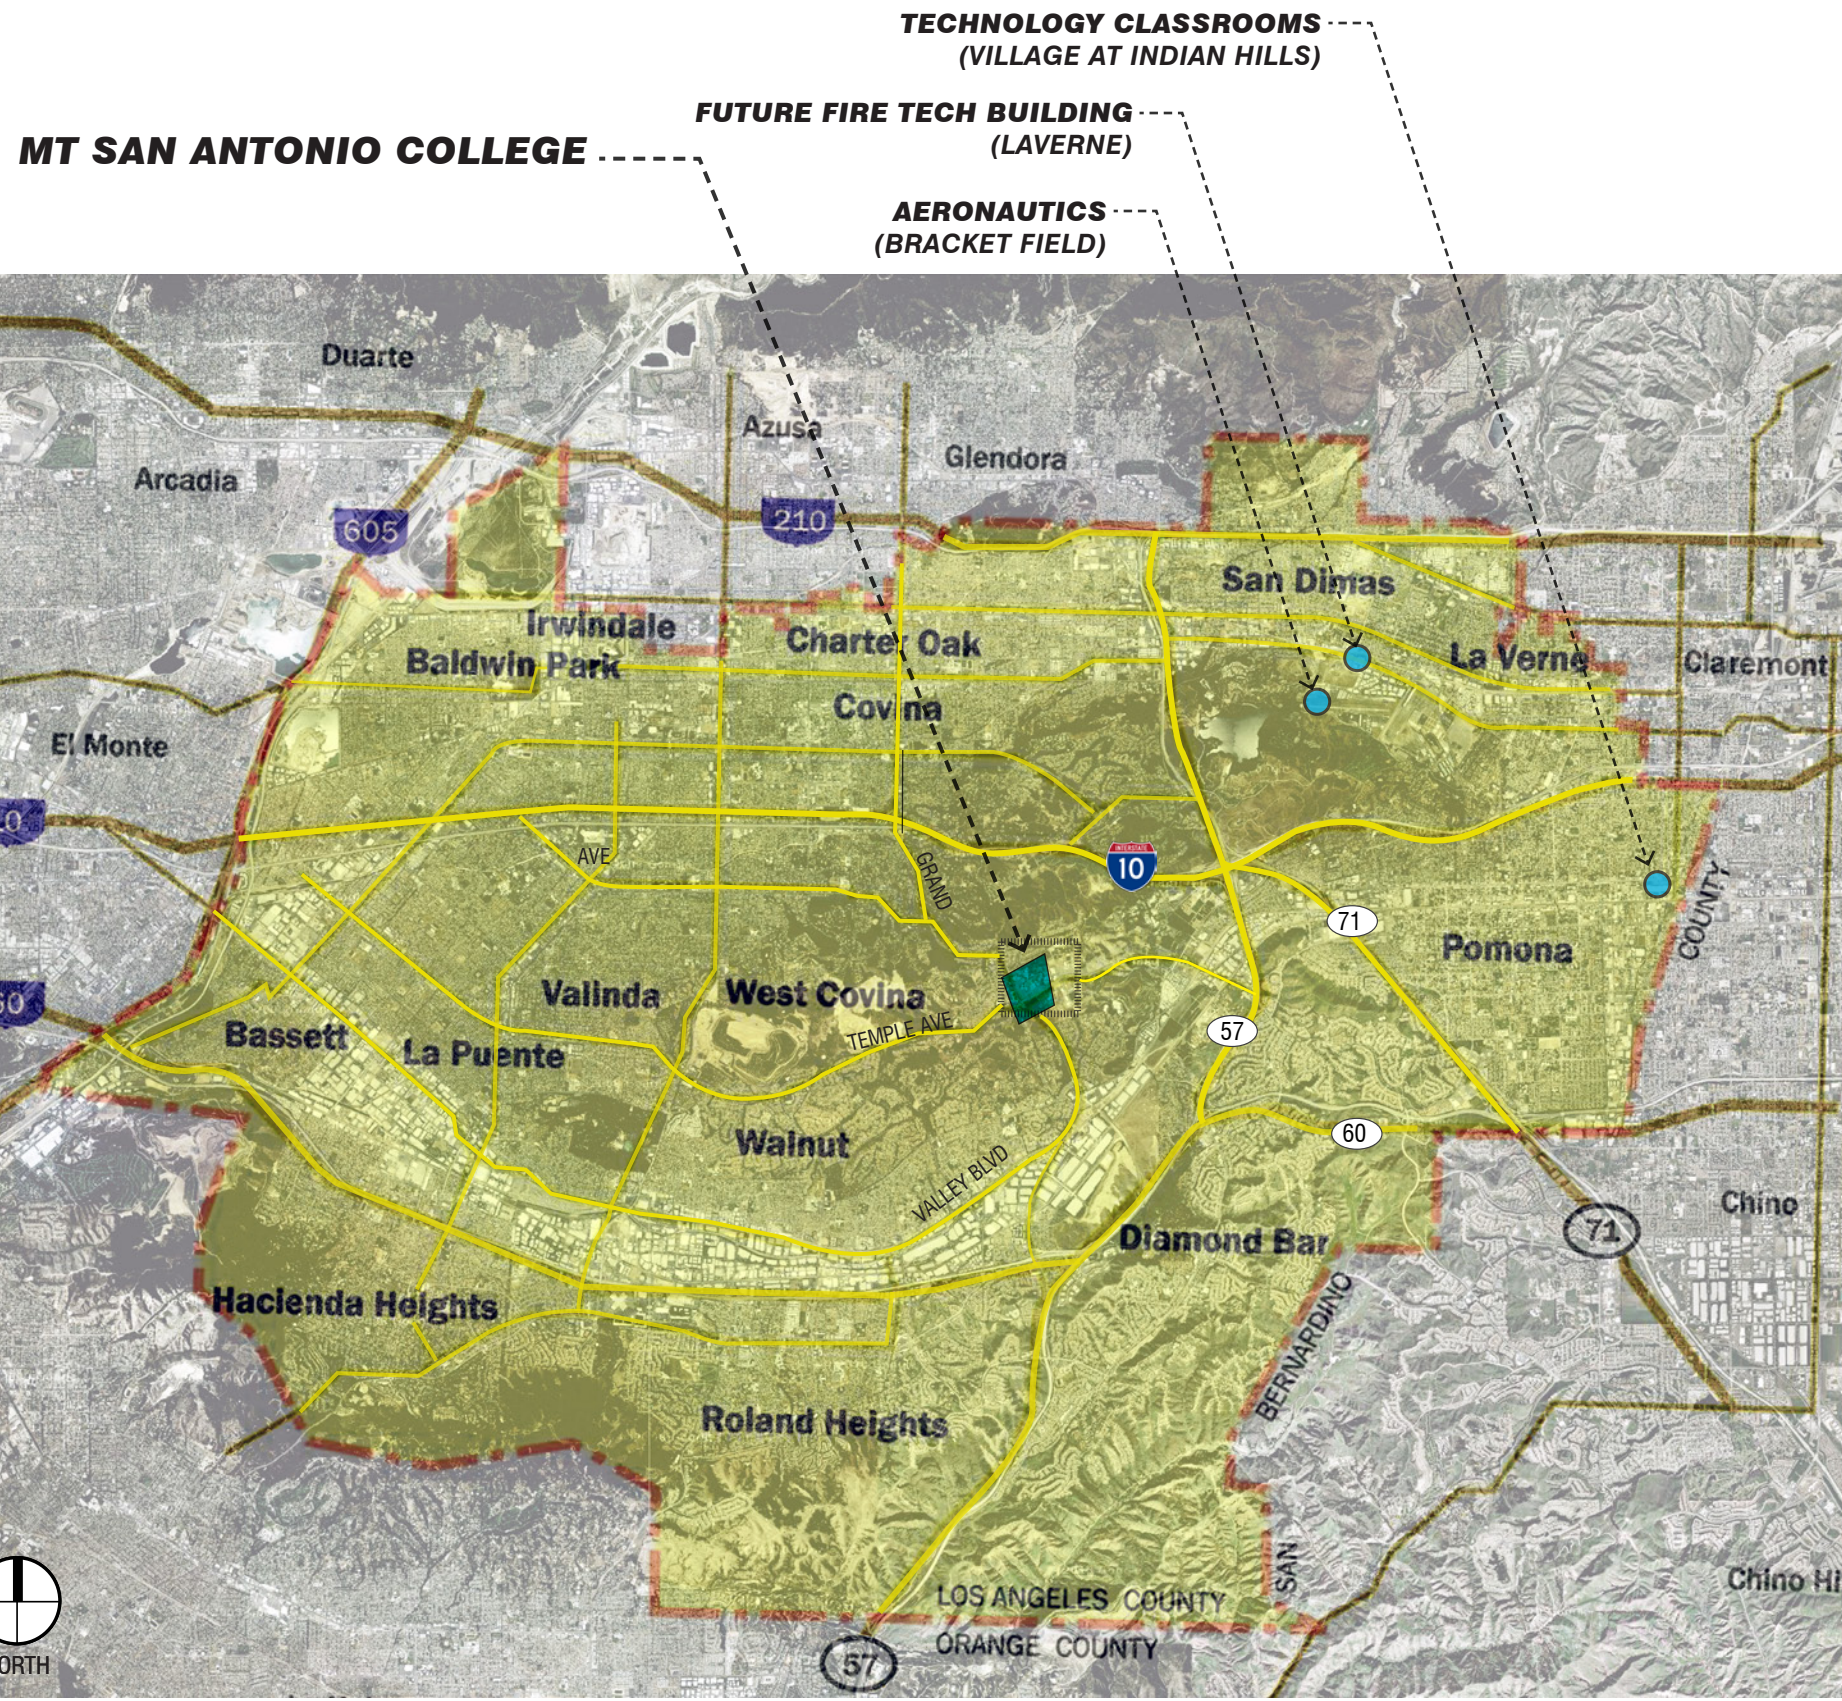

Measure R Bond in the amount of \$221 million was passed in November 2001 for campus physical needs for the people of East San Gabriel and Pomona-Walnut Valleys. The physical needs focused on the need to replace deteriorated and functionally inadequate World War II military hospital facilities that formed a major part of the MtSAC campus. Passage of Measure R made construction bonds available to MtSAC. The following projects have been completed with Measure R funding:

- Health Careers Center (67A)
- Student Health & Resource Center (67B)
- Language Center (66)
- Athletic Fields – softball, baseball, (2) soccer
- Arts Studio (1B Renovation)
- New Central plant providing chilled water and power for all proposed buildings (29)
- Founders Hall Restoration (10)
- Welding & Air Conditioning Complex (69)
- Science Laboratory Building (60)
- Livestock Pavilion & Equipment Technology (F9, F3)
- Campus Infrastructure and Improvements (2)
- Music Building Expansion
- Classroom Remodels (7, 11, 26)
- Student Services Center Renovation (9B)
- Math Building (61)
- Agricultural Sciences Building (80)

MEASURE RR

Measure RR in the amount of \$353 million was passed in November 2008. It was needed to complete projects started and to accommodate continued needs of enrollment growth. The projects planned for Measure RR funds include some that were included in Measure R.

E. EXISTING CONDITIONS

MT SAN ANTONIO COMMUNITY COLLEGE DISTRICT BOUNDARY

E. EXISTING CONDITIONS

Mt San Antonio College is located about twenty five miles East of Los Angeles, situated on 420 acres in San Gabriel Valley. The surrounding communities served by the college include: Baldwin Park, Bassett, Charter Oak, Covina, Diamond Bar, southern portion of Glendora, Hacienda Heights, City of Industry, Irwindale, La Puente, La Verne, Pomona, Rowland Heights, San Dimas, Valinda, Walnut and West Covina.

There is one primary campus location for the college, located at Temple and Grand Avenue in Walnut, CA. The college offers programs at numerous other sites. The primary off site locations for classes are at Bracket Field for Aeronautics and Village at Indian Hills for Technology Classrooms. A new site at Laverne has been established that is planned to provide a location for the Fire Technology program, to be co-located with a future City of Laverne Fire Department building.

ENLARGED AREA OF MT SAC CAMPUS

EXISTING CONDITIONS

The Mt San Antonio College campus is roughly evenly split by Temple Avenue. Grand Avenue forms the western edge of campus, providing direct access to Interstate 10. West Temple Avenue allows east-west access to the northern and southern areas of the campus; similarly, Bonita Avenue runs north-south, providing access to the eastern and western portions of the campus. The northern edge of the campus is bounded by single family residential neighborhoods. The eastern edge borders the California State Polytechnic University (Cal Poly).

The site occupies a sloping plane that slopes from its northern edge down to Temple Ave. Hills predominate in the portion of the campus area south of Temple Ave. The eastern boundary is distinguished as a hilly agricultural zone that is used for grazing and is adjacent to similar uses at the Cal Poly campus. The site was originally occupied by a hospital, and a number of the buildings remain from that era, including the Campus Café.

The primary instructional buildings are currently located north of Temple, surrounded by parking lots. The athletic functions are split on each side of Temple, with the majority of exterior athletics located south of Temple. The tennis courts, pool, and fitness facilities are located north of Temple. The relatively long distance between the athletic programs creates difficulties for coordination of student schedules and curriculum. The eastern portion of the campus is dedicated to the Agricultural Sciences (AG SCI) program. This is a center of excellence for the college. It includes a comprehensive animal husbandry and agricultural curriculum, and includes a herd of cows with graze on land north and south of Temple, horses, pigs, and other animals. The Ag Sci programs are not connected to the pedestrian circulation of the campus and due to their location the program exposure and presence is highly limited both for students outside the curriculum and for the community.

The campus is identified primarily by two masonry monument signs & vehicle entry landscape elements on Temple Avenue and two on Grand Avenue. The remainder of the site perimeter consists of chain link fencing, sidewalks directly at street curbs, and vast relatively unlandscaped parking lots.

There has been systematic improvement over the course of the bond work, with major pedestrian site element upgrades, demolition of buildings past their useful life, and construction of state of the art new instructional spaces. This master plan update identifies a framework for continued improvement of the campus to accommodate potential growth, including planned and future building zones, improved pedestrian paths and open space, and improved vehicular circulation and parking strategies.

EXISTING PEDESTRIAN CIRCULATION

EXISTING PEDESTRIAN CIRCULATION

Currently, Mt San Antonio College campus lacks a cohesive pedestrian circulation system. The system lacks clarity and hierarchy. Furthermore, the primary paths of pedestrian travel tend only to connect the parking to the campus and building to building with little regard for the making of well defined and usable outdoor spaces. Many of the existing walks are unpleasant expanses of asphalt which students and faculty are required to traverse. Landscaping and hardscaping are both underdeveloped. Many walks within the Primary Educational Zone cross vehicular drives and are adjacent to parking lots. The pedestrian circulation system is further jeopardized by the four to five-lane 45 MPH road, W. Temple Ave. Both the students parking in the peripheral lots and a majority of the Athletic Program (located south of Temple Ave.) are negatively impacted by this fragmentation.

EXISTING VEHICULAR CIRCULATION

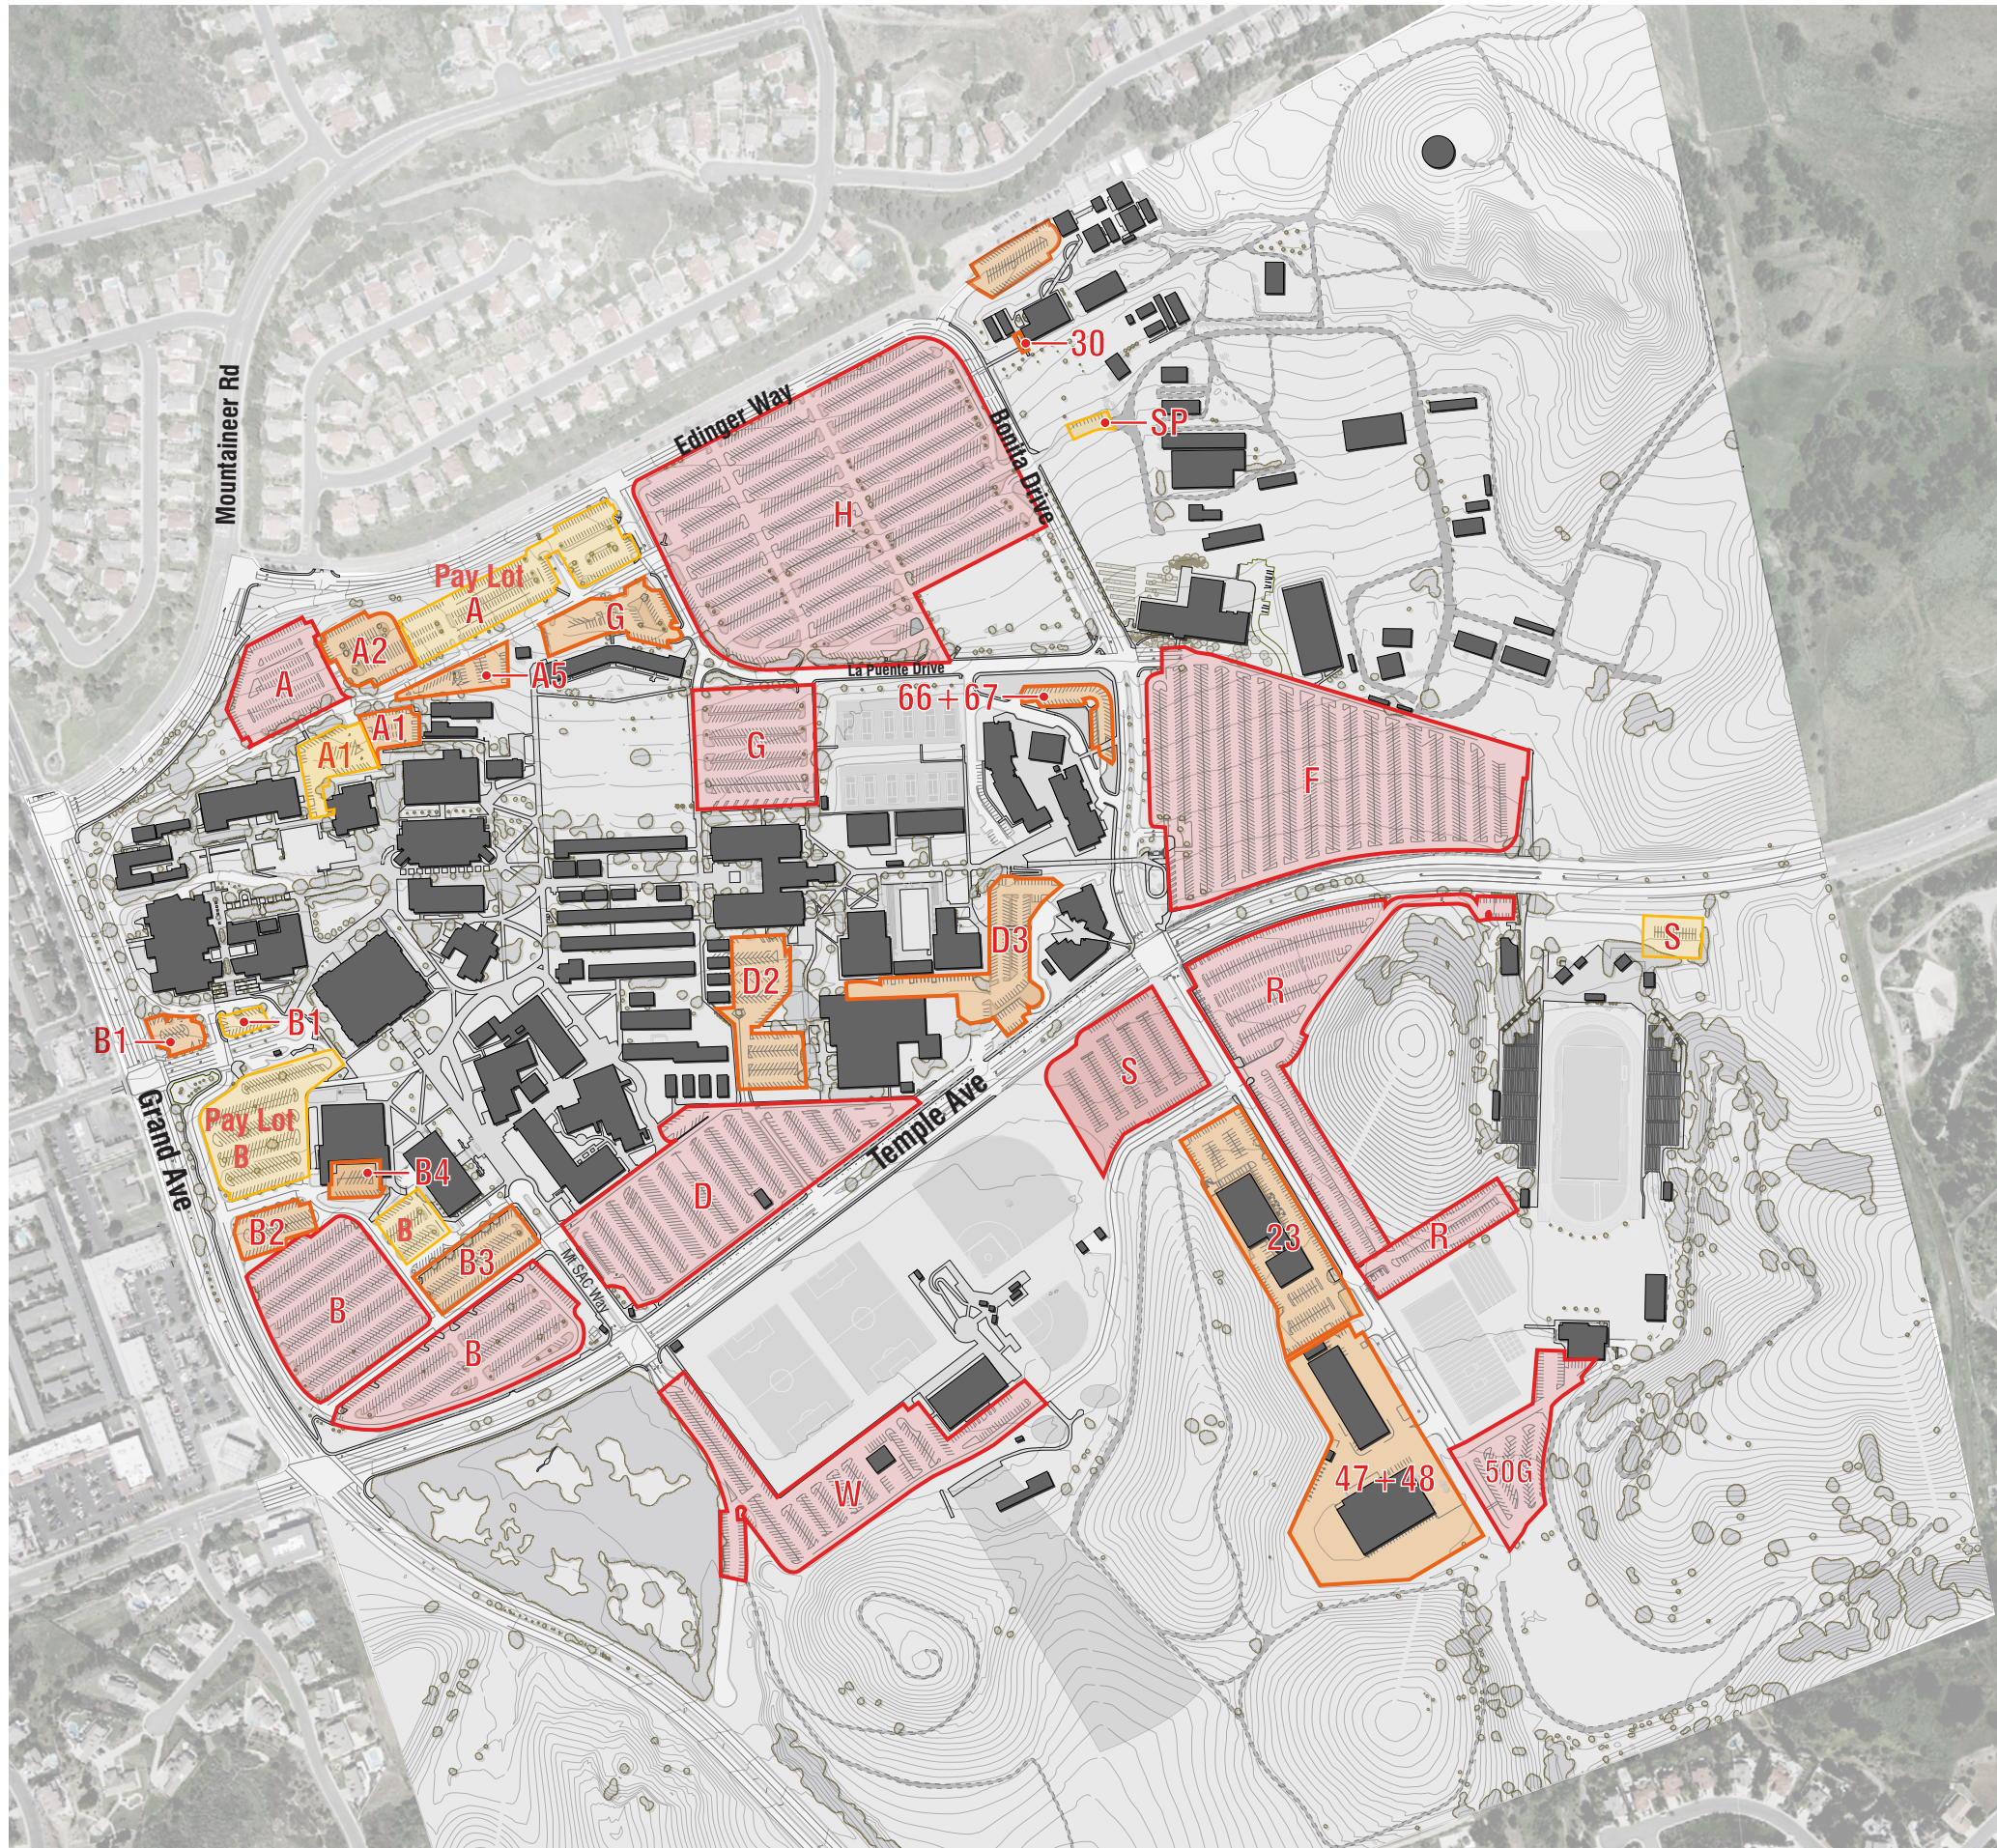

EXISTING VEHICULAR CIRCULATION

The major vehicular circulation on the Mt San Antonio College campus is a major hurdle for a safe, connected campus. Currently motor vehicles are capable of accessing deep into the campus. They are primarily using current pedestrian walkways as routes for service and delivery. This poses a threat to the pedestrians utilizing campus walks, and poses a threat to the security of intra-campus access by motor vehicle.

Vehicular circulation around the perimeter of the Primary Educational Zone and access to the adjacent parking lots is difficult to navigate. Currently Grand Ave, and Temple Ave. serve as a primary means of circumnavigation around the zone. While La Puente Drive offers access around the West end of the campus it is underdeveloped and a circuitous route that passes through parking lots and crosses pedestrian walks.

F. MASTER PLAN

The Facility Master Plan Update continues the primary improvements planned by the Measure RR projects and previous planning efforts. The key recommendations are:

- establish use zones in which each incorporate areas for pedestrian interaction and enhance integration
- improve connectedness between each use zone
- illustrate location of all projects currently planned by the District
- Illustrate potential future building sites for instruction programs for future growth
- establish a linked network of pedestrian circulation, open spaces and exterior study/collaboration to enhance student/faculty/staff learning and campus life
- plan vehicular circulation that will limit pedestrian conflicts while allowing ease of access to parking and service for buildings
- establish location and potential capacity of parking improvements to accommodate planned student growth

FUTURE BUILDING PROJECT ZONES

CAMPUS ZONING PLAN

Identifying zones of primary use is recommended to establish a guideline for location of programs, develop resources easily accessible, and establish overall infrastructure need. Five use zones are proposed according to their primary use. The zones are a Primary Educational Zone, Athletics Zone, Agricultural Zone, Wildlife Sanctuary Zone and Future Growth Zone. Overlapping zones are shown to bridge the parking lots and roads that separate them. Planning for the Future Growth Zoning is not within the scope of this update. Planning for the Wildlife Sanctuary Zone will consist of recommendations for an improved perimeter and access points only, as that area involves joint use/management.

LEGEND

 HISTORIC CROSS COUNTRY COURSE

ENLARGED PRIMARY EDUCATIONAL ZONE

The Primary Educational Zone consist of the core of the instructional classroom, administrative and campus life buildings and is the traditional heart of the campus. Although the location of most new structures within the Educational Zone have been established before this update the Facilities Master Plan Update 2009 does propose several changes to the Educational Zone in order to create a more connected, beautiful and useful campus. It is planned to allow most areas to be reached within a 10 minute walking time. Because the Educational Zone perimeter is completely surrounded by parking lots the existing campus core has been cut off from both the Agricultural and Athletic Zones. This Master Plan update proposes to expand the Primary Educational Zone east in order to overlap with the Agricultural and Athletic Zones and create a more cohesive campus. It incorporates the areas of the Agricultural and Athletics zones that are planned to have the key instructional buildings for those zones. Future buildings in this zone are planned on its eastern side to provide a termination for the major east-west pedestrian walk in that zone and central to the north-south pedestrian walk proposed to connect the agricultural, education, and athletics zones.

A new major Athletics facility is planned for the southeast corner of Temple Ave and Bonita Drive. A proposed bridged connection from the northwest corner of Temple Ave and Bonita Drive will connect the Primary Educational Zone to the Athletics Zone.

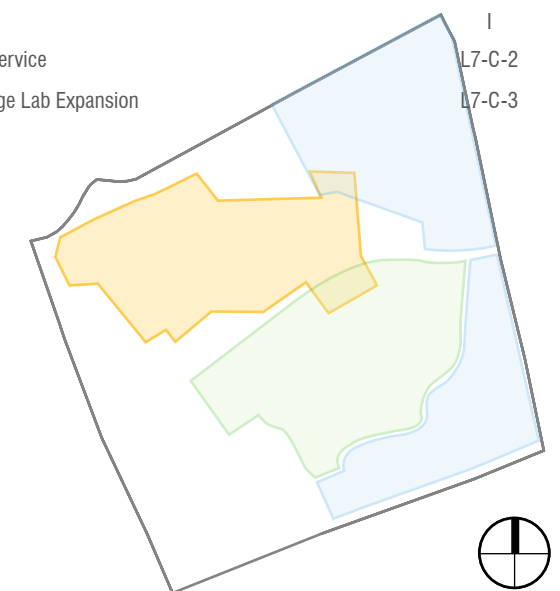

Along with the three primary zones Mt SAC has two other zones: The Wildlife Sanctuary and a Future Growth Zone located on the opposite side of Grand Ave from the Wildlife Sanctuary.

LEGEND

- FUTURE NEW BUILDING ZONE
- A** BOND MEASURE PROJECT ID
- 1** NEW OPEN SPACE ID

ENLARGED AGRICULTURAL ZONE

The Agricultural Zone includes the North East portion of the campus and extends across Temple Avenue to include open areas used for grazing of livestock all the way to the southern most point of the campus. The Agricultural Zone has traditionally been cut off from the other campus zones by parking lots and roads. By locating the new Agricultural Science Building at the southwest portion of the Agricultural Zone and extending the Primary Educational Zone East to overlap the Agricultural Zone we will establish a strong connection between the Zones.

New projects in the Agricultural Zone include:

1. New Water Tower (adjacent to the existing Water Tower on the northeast most portion of the site)
2. Several new open spaces that with similar hardscape and landscape to match the Educational Zone open spaces
3. Develop the existing service road into a more people friendly pedestrian circulation route through the heart of the Agricultural Zone.
4. New Farm Market located adjacent to an open space to allow flexible use of the open space for Farm Market activities.

LEGEND

- FUTURE NEW BUILDING ZONE

NORTH
KEY PLAN

ENLARGED ATHLETIC ZONE

The Athletic Zone is located on the Southside of Temple Avenue and consist of various playing and practice fields, a historic cross country track that serves Mt SAC nationally renowned program and events, Hilmer Lodge Stadium, a future major Physical Education/Wellness facility and Planning, Maintenance and Construction related structures.

The development of the Athletic Zone is concentrated primarily towards the north end along Temple Ave and along Bonita Drive. New Projects include:

1. Physical Education/ Wellness facility
2. New Football Practice Field located adjacent to the existing practice field.
3. New Volleyball Court
4. Relocation of Tennis Courts to Athletic Zone from Educational Zone.
5. Basketball Court and Roller Hockey Court.
6. New Toilet and Snack Bar Facilities for Soccer Fields.
7. Additions to Planning and Maintenance Facilities.
8. Heritage Hall
9. A new perimeter pedestrian trail to connect with campus pedestrian circulation.

KEY PLAN

OPEN SPACE

Mt San Antonio College currently suffers from a lack of well defined open spaces. The open spaces are often what define a campus as much as the buildings. Well designed open spaces create opportunities for student interaction and will help develop a sense of community.

PEDESTRIAN CIRCULATION

Pedestrian circulation on the Mt SAC campus is proposed to be centered around two primary themes: The Cohesive Campus and Creating Community.

The creation of a major perimeter loop that extends to all zones will help reinforce connections between the Educational, Athletic and Agricultural Zones. The perimeter walk will also be a major amenity for the campus as a walking and jogging trail. Beyond the new perimeter circulation new direct connections between Primary Educational and Athletic/Agricultural Zones are proposed as “short cuts” between the zones. A new connection to the a major elevated crosswalk over Temple Ave to the Athletic Zone and new Physical Education/Wellness facility is proposed to cut diagonally across the Primary Education Zone. Another diagonal walk across the east parking lot from Bonita Drive to the Agricultural Zone is also proposed.

Existing crosswalks across Temple Ave at the Grand Avenue intersection, Mt Sac Way and Bonita Drive will be supplemented with a new crosswalk located at the entry from Temple Ave. to Student Lot D. The new crosswalk will provide direct access to the Mazmanian Field and the Soccer Fields area.

Connections from the Primary Educational Zone to the perimeter parking areas will be enhanced to provide a well defined, safer and more pleasant route from the parking areas.

New distinct open spaces will be defined by the pedestrian walks and reinforced with landscaping. Curved Primary Walks create a picturesque campus, improve the flow of pedestrian traffic, provide a hierarchy of circulation and help resolve topographic grade changes. All pedestrian walks should be reinforced by new trees that will provide shade, cut noise and make for a more beautiful campus.

PEDESTRIAN CAMPUS LOOP

- FUTURE BUILDING PROJECT ZONES
- PRIMARY PEDESTRIAN CIRCULATION
- SECONDARY PEDESTRIAN CIRCULATION
- PEDESTRIAN CROSSWALK
- HIKING / RECREATIONAL TRAILS
- BUS STOPS
- VAN ACCESS SERVICES

VEHICULAR CIRCULATION

Primary on site vehicle circulation is planned on the northern edge of the site to allow direct access to the proposed new parking deck and connect across Temple Ave. to the athletics zone. A new generous entry and vehicle drop off is proposed to from Temple to the proposed LRC site. This expanded entry drive connects to a parking access drive that travels all the way to the main entry drive off Grand Avenue. That entry drive is too tight in size to accommodate the number and need for access for the current population.

- PUBLIC ROAD
- VEHICULAR CIRCULATION
- VEHICULAR CIRCULATION (UNPAVED)
- SERVICE VEHICLE CIRCULATION
- BUS STOPS
- VAN ACCESS SERVICES

10 MINUTE WALKING RADIUS

The center of campus activity will be shifting to the east due to the large new educational facilities built or planning to be built, and due to the location of the proposed LRC. The diagram illustrates how most primary instructional buildings in the three primary instruction zones – educational, agriculture, and athletics – are within a 10 minute walking radius.

LEGEND

PROJECT DEFINITION SUMMARY

A

June 6, 2010

PROJECT NAME	Library, Learning Resources & Campus Center
BOND PROJECT LETTER	A
BUILDING NUMBER	TBD
DATE ORIGINALLY CONSTRUCTED	N/A
EXISTING BUILDING ASF/GSF	N/A
AREA OF WORK ASF	153,655
AREA OF WORK GSF	217,000
PROJECT BUDGET – STATE BOND	\$79,000,000
PROJECT BUDGET – LOCAL BOND	\$72,000,000
PROJECT D BUDGET TOTAL	\$151,000,000
BOND PHASE OF WORK	
SCHEDULE	Design: Summer 2009(site) – Fall 2013 Construction: Fall 2013- Fall 2016

PROJECT DESCRIPTION

The project will construct a new facility that would consolidate all the services of the Learning Resource Center (LRC), Student Life Center, and the Campus Center into one permanent complex and provide additional space that would accommodate the enrollment growth projected. The existing facilities in Building 6 were built in the early 1940s - 1970s. Significant technological advances and growth have occurred since then. This project will create a modern facility that would provide an efficient network infrastructure for current student needs, upgraded and necessary technologies, and make better and more efficient use of assignable space to enhance the educational learning environment.

Overall improvements are:

1. Consolidate all services of the LRC, Student Life Center, and Campus Center
2. Provide appropriate support for student organizations and development of leadership skills
3. Provide building-wide network, telecommunications, and electrical infrastructure to safely locate computers and meet advances in technology that will enhance educational delivery to students
- 4 Provide modern learning environment capable of enhancing instruction, utilizing the technology that will prepare students for four-year institutions and current employment standards
5. Improve configuration of institutional space for increased and efficient usage
6. Provide central location for student activities and bookstore
7. Provide large gathering spaces easily accessible to the community
8. Provide a central location for food services

PROJECT DEFINITION SUMMARY

B

June 6, 2010

PROJECT NAME	Business and Computer Technology
BOND PROJECT LETTER	8, B
BUILDING NUMBER	TBD
DATE ORIGINALLY CONSTRUCTED	N/A
EXISTING BUILDING ASF/GSF	N/A
AREA OF WORK ASF	60,000
AREA OF WORK GSF	87,000
PROJECT BUDGET – STATE BOND	\$23,000,000
PROJECT BUDGET – LOCAL BOND	\$23,000,000
PROJECT BUDGET TOTAL	\$46,000,000
BOND PHASE OF WORK	
SCHEDULE	Design: Fall 2009(site) – Fall 2011 Construction: Fall 2011- Fall 2013

PROJECT DESCRIPTION

The Business and Computer Technology Center will provide for construction of a new 87,000-square-foot center to consolidate business administration, accounting, management, computer information systems, office technology, and family and consumer sciences instructional programs. These programs are currently housed in facilities constructed in the 1940s that are not suitable for renovation. The new two-building complex will include state-of-the-art technology that supports current teaching methods including increased use of laboratory-based learning environments as opposed to traditional lecture classrooms. The new space will more appropriately support instruction in skills-based programs such as Hospitality and Restaurant Management and Fashion Design.

The designed space includes a law library and mock courtroom, a foods lab and training kitchen, large open computer labs, 45 - 50 classrooms, and faculty and division offices. Support spaces include meeting and conference areas, locker rooms, laundry, and printing services. The building site will include outdoor gathering spaces and a landscaped courtyard suitable for group activities.

PROJECT DEFINITION SUMMARY

C

June 6, 2010

PROJECT NAME	Child Development Center
BOND PROJECT LETTER	6, C
BUILDING NUMBER	TBD
DATE ORIGINALLY CONSTRUCTED	N/A
EXISTING BUILDING ASF/GSF	N/A
AREA OF WORK ASF	22,000
AREA OF WORK GSF	33,000
PROJECT BUDGET – STATE BOND	N/A
PROJECT BUDGET – LOCAL BOND	N/A
PROJECT BUDGET TOTAL	\$20,000,000
BOND PHASE OF WORK SCHEDULE	Design: Complete Construction: Spring 2010- Summer 2011

PROJECT DESCRIPTION This project will expand, consolidate, and improve the Child Development Center in a new protected site on campus and create a state-of-the-art Early Childhood Education Laboratory.

This project will provide construction of four new buildings totaling 35,000 square feet to house child development classrooms, laboratories, observation spaces, and all required facilities for providing child care for up to 162 children, from birth to five years old. This facility will meet all State licensing requirements and will serve as a model facility for combining child care education and training programs with child care services. College classrooms with observation windows will be placed adjacent to child care areas in order to offer appropriate learning opportunities for students in on-site psychology and nursing classes in childhood development.

Additionally, the new Center is designed to include faculty and administrative offices, meeting and conference rooms, staff and lab preparation areas, children’s meal preparation and serving spaces to provide three meals a day; nursing and isolation areas for infants and toddlers, and spaces designed for student collaborative activities. Support facilities will also include specialized restrooms for small children.

Site work will include walkways, roadways, emergency vehicle access, parking enhancements for a convenient drop-off parking area, handicap access, play areas and fencing to ensure the safety of the children, and landscaping.

PROJECT DEFINITION SUMMARY

11, D

June 6, 2010

PROJECT NAME	Athletic Complex Phase 2
BOND PROJECT LETTER	11, D
BUILDING NUMBER	TBD
DATE ORIGINALLY CONSTRUCTED	N/A
EXISTING BUILDING ASF/GSF	N/A
AREA OF WORK ASF	38,000
AREA OF WORK GSF	44,000
PROJECT BUDGET – STATE BOND	\$8,000,000
PROJECT BUDGET – LOCAL BOND	\$18,950,000
PROJECT BUDGET TOTAL	\$26,950,000
BOND PHASE OF WORK SCHEDULE	

Site Improvements Design: Spring 2009- Summer 2010
Construction: Summer 2010- Winter 2011

Tennis Courts Design: Complete
Construction: Winter 2011- Summer 2011

Gymnasium Design: Spring 2013- Summer 2015
Construction: Summer 2015 - Winter 2017

PROJECT DESCRIPTION The second phase of the Athletics Complex completes the relocation and consolidation of the majority of the athletics programs to the south side of the campus, allowing for growth of other educational programs closer to the center of campus.

Replacement of the old Gymnasium, which was constructed in the 1940s and does not meet ADA/ accessibility standards, will provide a fully accessible facility with improved spectator seating and facilities for the broadcast of athletic competitions. (The cost of bringing the existing Gymnasium up to current standards would exceed the cost of a new Gymnasium.) The building will also include training and rehabilitation spaces for team sports as well as support spaces for physical education and athletic programs.

Relocation of the tennis courts will allow for the construction of the new 80,000-square-foot Business and Computer Technology Center, to be located adjacent to other academic facilities. A new golf driving range will support the instructional program and offer opportunities for the community to attend golf classes and practice their game. A new football-sized field will allow the various field sports adequate space for practice, and upgraded safe facilities for hammer throw and shot put will be constructed.

PROJECT DEFINITION SUMMARY

E

June 6, 2010

PROJECT NAME	Career and Technical Education Building Renovation
BOND PROJECT LETTER	E
BUILDING NUMBER	TBD
DATE ORIGINALLY CONSTRUCTED	N/A
EXISTING BUILDING ASF/GSF	N/A
AREA OF WORK ASF	88,000
AREA OF WORK GSF	128,143
PROJECT BUDGET – STATE BOND	\$19,000,000
PROJECT BUDGET – LOCAL BOND	\$19,000,000
PROJECT BUDGET TOTAL	\$38,000,000
BOND PHASE OF WORK	
SCHEDULE	Design: Summer 2013- Summer 2014 Construction: Summer 2014- Winter 2017

PROJECT DESCRIPTION This project will improve the instructional programs at the College by remodeling the classroom buildings known as the Technology Center. The buildings currently house the Aeronautics, Transportation and Travel; Aircraft Maintenance and Manufacturing; Architecture and Engineering Design Technology, Electronics and Computer Technology, Computer Security, Fire Technology, Allied Health including Nursing, and Public Services instructional programs. As these programs have changed and developed over time, their space infrastructure needs have changed dramatically. This project will address those needs by constructing learning spaces that meet the current program needs.

The Technology Center was constructed prior to the use of computer technology in the classroom. Therefore, these buildings are in need of modernization to provide better access to technology and meet current codes, improve efficiency, and remove asbestos-containing building materials. The buildings were also constructed at a time when primarily male students attended the programs housed in these buildings, and the women's restroom facilities are not adequate for the demographics of the current student population. This project will include electrical, mechanical, and technology system upgrades, retrofitted interiors for user efficiency; and new casework and all interior finishes. A recent structural analysis of the facility indicates that major work must be done to the five-story portion of the building to protect students and staff and to prevent a catastrophic failure should a major seismic event occur in the area. The building also needs improvements such as the replacement of the elevators and automatic doors to meet current building code and accessibility standards.

PROJECT DEFINITION SUMMARY

Phase 1	\$8,000,000
Phase 2	\$17,500,000
SCHEDULE	
Phase 1	Design: Complete Construction: Spring 2009- Summer 2010
Phase 2	Design: Fall 2014- Summer 2016 Construction: Summer 2016- Summer 2018

PROJECT DESCRIPTION This project consists of two phases; the first will upgrade a currently non-compliant facility to the State Field Act standards required for teaching space, and the second will renovate sections of the current library building for much needed teaching space.

Phase 1 involves the renovation of an existing 20,000-square-foot metal building to provide a new Physical Education Center incorporating faculty offices, the division offices and support areas, weight rooms, classrooms, team rooms, and locker/shower rooms. The building was originally constructed in 2000 as a temporary facility to house the nursing program prior to completion of their permanent building. Major structural modifications will ensure that the facility can be used for the appropriate support of students in credit classes on a permanent basis by complying with State Field Act requirements and seismic standards.

Following the construction of the new Library-Learning Resources and Student Activity Center, the Phase 2 of the project will renovate approximately 40,000 square feet on the top floor in the existing Learning Technology Center that currently houses the Library.

The space will include desperately needed active learning space, laboratories, and classroom space necessary to meet the College's growth needs in the future as well as faculty offices, meeting and conference rooms, and office support areas.

PROJECT DEFINITION SUMMARY

AREA OF WORK ASF	7,000
AREA OF WORK GSF	10,000 and Training Tower
PROJECT BUDGET – STATE BOND	
PROJECT BUDGET – LOCAL BOND	
PROJECT BUDGET TOTAL	\$10,000,000
BOND PHASE OF WORK	
SCHEDULE	Preliminary Planning: 2009 Design: Summer 2009- Winter 2011 Construction: Winter 2011- Fall 2012
PROJECT DESCRIPTION	This project provides for the construction of a Fire Academy facility on or near the campus, eliminating the need to lease space from other institutions. This facility will improve the cooperation and synergy between the College and the Fire Academy through a fixed location and will provide an improved working relationship between the Fire Academy, Fire Science, and Paramedic programs. The College is evaluating several sites to determine whether this will be an on- or off-campus facility. A state-of-the-art training facility will be constructed to meet State environmental laws, fire service training needs, and local storm water requirements. The facility will include a Training Tower as well as an administrative building to contain instructional classrooms, faculty offices, and storage space, along with space for training equipment and vehicles. Fire Academy space allows for program growth at a time where firefighters are desperately needed in the area and simultaneously creates a local opportunity for neighboring public safety operations to update and maintain required training levels. The project will foster the development of partnerships with many of the local firefighting units.

PROJECT DEFINITION SUMMARY

I

AREA OF WORK ASF	
AREA OF WORK GSF	
PROJECT BUDGET – LOCAL BOOND	\$3,500,000
PROJECT BUDGET – OTHER	\$3,500,000
PROJECT BUDGET TOTAL	\$7,000,000
BOND PHASE OF WORK	
SCHEDULE	Preliminary Planning: Summer 2009- Spring 2013 Design: Spring 2013- Summer 2014 Construction: Summer 2014- Winter 2016
PROJECT DESCRIPTION	<p>The Public Transportation Center will provide easy access to the campus for students and staff who wish to ride the bus to Mt. SAC. The Center will attract additional bus routes and carriers to the campus and will create easy access from both sides of Temple Avenue with a safe pedestrian bridge crossing the roadway. Traffic in the area can be significantly reduced by constructing modern bus turn-outs to allow loading and unloading without delaying traffic.</p> <p>The Center will decrease the number of vehicles on the road by encouraging increased use of public transportation that provides the riders and the transportation agencies with the facilities they need. Pedestrian pathways to the interior of the campus will be upgraded and improved to ensure safe, compliant, and attractive aces at each of the six main entry points.</p>

PROJECT DEFINITION SUMMARY

J

June 6, 2010

PROJECT NAME	Parking, Public Safety and Traffic Improvements
BOND PROJECT LETTER	J
BUILDING NUMBER	TBD
DATE ORIGINALLY CONSTRUCTED	N/A
EXISTING BUILDING ASF/GSF	N/A
AREA OF WORK ASF	
AREA OF WORK GSF	
PROJECT BUDGET – STATE BOND	
PROJECT BUDGET – LOCAL BOND	
PROJECT BUDGET TOTAL	\$44,000,000
BOND PHASE OF WORK	
SCHEDULE	Preliminary Planning: Summer 2009- Winter 2010 Design: Winter 2010- Summer 2011 Construction: Summer 2011- Winter 2013
PROJECT DESCRIPTION	<p>Mt. San Antonio College serves over 65,000 students, with the vast majority commuting from the local communities. Currently, there are three heavily used main entry points to the campus. Traffic in these areas spills out on to the public streets, impacting everyone in the community. This project will play a major role in meeting the Master Plan goal to create three new main entry points; allowing efficient entry and exit of vehicles and balancing the flow of traffic around campus. Interior lighting, emergency phones, and controlled pedestrian crossings at each entry and within the campus interior will provide for efficient and safe passage of students, staff, and the public on, off, and within the campus.</p> <p>Current traffic studies indicate that Mt. SAC will require an additional 1,400 to 1,800 parking spaces by 2014 to accommodate expected growth. A new parking structure will address this need and will allow the college to continue to grow to serve students in the area. The parking structure site has been selected so that vehicles can enter the campus from the intersection at Mountaineer and Grand Avenue at the northwest corner of the campus, reducing the traffic impact on the busy Grand and Temple Avenues and the San Jose Hills Road and Grand Avenue intersections.</p> <p>Constructing parking on the northwest corner of campus will provide parking spaces where they are needed, closer to the classrooms and Student Services facilities that currently do not have adequate parking. Design criteria will ensure an attractive, non-intrusive, structure. For this project, the design-build project delivery method will be considered to ensure the best value for the district.</p>

PROJECT DEFINITION SUMMARY

L

June 6, 2010

PROJECT NAME	Campus-wide Improvements
BOND PROJECT LETTER	L
PROJECT BUDGET	
Infrastructure Improvements	\$35,000,000
COPS Debt Retirement	\$11,000,000
Temporary Space	\$4,000,000
Demolition	\$4,500,000
Equipment Allowance	\$5,000,000
Contingency	\$21,000,000
Improvement Projects	\$17,800,000
Construction Support	\$4,900,000

SCHEDULE

PROJECT DESCRIPTION	<p>Infrastructure Improvements (overview, projects L1-A through L1-W) – Studies indicate that the District faces a backlog of infrastructure improvements in excess of \$60 Million. This project reduces that backlog by roughly half by upgrading and replacing critical infrastructure installed prior to 1970. An efficient campus-wide approach will maximize efficiency, while minimizing cost and impact to students and faculty, by dividing the campus into twelve zones. These utility system upgrades are essential to the campus operation and will prevent continual power outages, sewer overflow, polluted storm drain run-off, computer network failures, and inadequate water pressure for fire suppression systems. New reclaimed water system and energy efficiency projects are included. Rooftop solar and solar array systems will be evaluated and constructed as implementation costs allow.</p> <p>COPS Debt Retirement (Project L2)– In 2008, a Certificates of Participation loan (COPS) was authorized by the Board of Trustees for various construction projects not included in the 2001 Measure R. This item will retire that debt. COPS projects include the Administration Building renovation match funds, exterior improvements for three buildings, and new parking lot construction.</p> <p>Temporary Space (Project L3) – Temporary housing must be arranged for classrooms and offices that are impacted by major renovation work or where existing facilities are demolished so new spaces can be constructed. Utilities and site improvements must be provided for all temporary units, and sites must be restored after the units are removed.</p> <p>Demolition (Project L4) – The Master Plan includes demolition and removal of seven buildings. Equipment Allowance</p> <p>(Project L5) – Allowance must be made for major instructional equipment necessary for the long-term operation of each facility. Contingency</p> <p>(Project L6) – Contingency funds must be available to cover excess construction cost inflation, necessary changes in project scope of work, and unforeseen elements. Any excess contingency will be used to further reduce scheduled maintenance and infrastructure improvement backlogs. Facility Improvement Projects</p> <p>(Projects L7A-C) – Several smaller renovation and space additions are necessary as secondary effects to the major projects. Projects include renovation of the old Agricultural Sciences Labs to provide teaching space, conversion of the old Bookstore into office space, and a new plan room for the Facilities Management offices.</p>

PROJECT NAME	San Jose Hills Entrance/Intersection Improvements
BOND PROJECT LETTER	L1-A
PROJECT BUDGET – STATE BOND	
PROJECT BUDGET – LOCAL BOND	
PROJECT D BUDGET TOTAL	\$2,200,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Summer 2017 – Winter 2018

PROJECT DESCRIPTION

The San Jose Hills Road entrance is the main access point to campus from the west. The area is currently plagued with traffic snarls (that back up onto Grand Avenue), inadequate pedestrian pathways, an ineffective drop-off zone, and underground utility systems that are in need of upgrade. This project will improve the flow of traffic at the four-way intersection on campus and create a secure connection with the access/fire road that serves the northeast campus area. New student, faculty and visitor parking will be developed and effective pedestrian circulation will be featured; including adequate public access to the Performing Arts Center and Founders Hall. Modifications to the pay lot B parking area will be included as necessary to accomplish complete corrections to traffic flow and resolve underground utility deficiencies. The continued need for the information booth will also be evaluated.

PROJECT DEFINITION SUMMARY

L1-B

June 6, 2010

PROJECT NAME	New Main Campus Entrance
BOND PROJECT LETTER	L1-B
PROJECT BUDGET – STATE BOND	
PROJECT BUDGET – LOCAL BOND	
PROJECT D BUDGET TOTAL	\$3,900,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Fall 2014– Fall 2015

PROJECT DESCRIPTION

As the Measure RR program unfolds, many new facilities will be built on the east side of the site. The campus begins to take shape around a central quad, oriented to the south of the Design Technology Center, east of the Student Services and Founders Hall facilities, west of the Humanities building and north of the Library, Learning Resources and Campus Center (Project A). This new geographic center point, which will be prominently identified by the new LRC/Campus Center, will be a primary destination and gathering place for many students, faculty, and staff; events will be planned in this area and it will be a place that the public will be invited to interface with the campus community. A new main entrance to campus in this area is essential. Not only will the campus community find improved access here, but the neighboring communities will benefit as well. By adding entrance points, commuter traffic will be able to move on and off campus more efficiently and deliveries will be centralized to the LRC/Campus Center, eliminating unsafe truck traffic in pedestrian areas and on campus traffic congestion.

The new main entrance project will add a traffic signal with dual left turn lanes on Temple Avenue between Mt. SAC Way and Bonita Drive, a multi lane entrance road that terminates with a safe, efficient drop off zone to the south of the new LRC/ Campus Center, and add short term, visitor and accessible parking. Underground utilities, pedestrian access, and landscape improvements will also be included. Aesthetic and infrastructure improvements to the main power station, traffic circulation, surface restoration, and landscape improvements to the adjacent student lot may be included if funds permit. The project is bounded on the south by Temple Avenue, on the west by Mt. SAC Way, on the northwest by the Science Laboratories building, on the north by the LRC/ Campus Center, and on the east by the Technology building.

Project sequencing - this work must be done in conjunction with the LRC/Campus Center project, and will require collaboration with the Walnut City Engineer. Ideally, this work will take place after additional student parking is available with the new parking structure.

PROJECT DEFINITION SUMMARY

L1-C

June 6, 2010

PROJECT NAME	Campus Site Improvements (South of Temple Avenue)
BOND PROJECT LETTER	L1-C
PROJECT BUDGET – STATE BOND	
PROJECT BUDGET – LOCAL BOND	
PROJECT D BUDGET TOTAL	\$5,000,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Summer 2009 – Summer 2010

PROJECT DESCRIPTION

The Temple Avenue/Bonita Drive intersection has become heavily used by the campus community and general population for major athletic events. With the further development of the athletics complex to the south of Temple, the segment of Bonita from Temple, south to Stadium Way, must be widened and the south side of the intersection must be properly aligned with the northern section of Bonita Drive to allow for safe pedestrian crossing and efficient traffic flow. The project will include modifications to the traffic signal and the addition of a second left turn lane from eastbound Temple to northbound Bonita. The short term parking permit dispenser site will be made permanent, and identification signage will be updated.

Project sequencing - this work must be coordinated with the Walnut City Engineer, and must be done in conjunction with the major grading work to the east. Planning work for the Public Transportation Center should be completed early to eliminate conflicts with this project.

Business and Computer Technology building and golf driving range sites, and the parking surface will allow for student parking while the new structure is built. Oak and walnut trees that must be removed will be relocated to or replaced in the expanded Wildlife Sanctuary at a minimum rate of 1.5 to 1 as per the College's 2008 Supplemental Environmental Impact Report.

Optional scope of work includes reclamation of the retention basin northeast of the Hilmer Lodge Stadium, installation of utility points of connection for future buildings at this and the planned site for the Heritage Hall facility, additional field restrooms, and reconstruction of the stadium concession stand.

Project sequencing - this work must be scheduled such that the tennis courts can be relocated prior to the start of construction of the Business and Computer Technology building; temporary parking must be established to recover displaced parking at the north side of the campus, necessary to construct the parking structure; and a temporary field house must be constructed before the old field house can be demolished. Planning work for the Public Transportation Center should be completed early to eliminate conflicts with this project.

Funding Notes - Project funds for temporary space (field house), the Bonita/Temple and Temple/Lot F intersection, and the tennis courts relocations projects are in addition to this project. Funds for the golf driving range construction are included in the budget.

PROJECT NAME	Temple & Bonita Intersection Improvements
BOND PROJECT LETTER	L1-D
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$900,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Spring 2010

PROJECT DESCRIPTION

The Temple Avenue/Bonita Drive intersection has become heavily used by the campus community and general population for major athletic events. With the further development of the athletics complex to the south of Temple, the segment of Bonita from Temple, south to Stadium Way, must be widened and the south side of the intersection must be properly aligned with the northern section of Bonita Drive to allow for safe pedestrian crossing and efficient traffic flow. The project will include modifications to the traffic signal and the addition of a second left turn lane from eastbound Temple to northbound Bonita. The short term parking permit dispenser site will be made permanent, and identification signage will be updated.

Project sequencing - this work must be coordinated with the Walnut City Engineer, and must be done in conjunction with the major grading work to the east. Planning work for the Public Transportation Center should be completed early to eliminate conflicts with this project.

PROJECT DEFINITION SUMMARY

L1-E

June 6, 2010

PROJECT NAME	Temple & Walnut Intersection Improvements
BOND PROJECT LETTER	L1-E
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$340,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Summer 2010

PROJECT DESCRIPTION

Under local bond Measures R and RR, three major building sites will be developed at the intersection of Bonita Drive and Walnut Avenue, where previously no buildings existed. The southeast corner of the intersection represents the largest parking area on campus. In order to ensure efficient traffic flow into the parking area and through the intersection, and safe pedestrian traffic to the three building sites, the intersection has been widened and realigned. Conduit infrastructure for the signal controls has also been installed as part of the first phase. This project is the final phase of the development of the Bonita and Walnut pedestrian safe intersection. The new signal will be installed with controlled pedestrian crossing, new crosswalks and wheelchair ramps will be added as necessary, and the lane striping at the intersection approach will be modified as needed at each roadway section.

Optional scope of work includes necessary improvements along Walnut Avenue, between Bonita Drive and parking lot G, to ensure that pedestrian crossing along this segment is safe and efficient.

Project Sequencing - safe pedestrian crossings must be established as the Agricultural Sciences project is occupied, while maintaining access to student parking lot F.

PROJECT DEFINITION SUMMARY

L1-F

June 6, 2010

PROJECT NAME	Walnut Drive/Parking Lot G Intersection Improvement
BOND PROJECT LETTER	L1-F
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$650,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Summer 2011

PROJECT DESCRIPTION

Student parking lot H contains nearly 1,000 parking spaces and is often full throughout the semester. Students that park in lot H must cross Walnut Avenue safely and without impeding traffic. Currently, pedestrian crossing exists at the north side of student parking lot G. As the Business and Design Technology Center facilities are occupied, the pedestrian traffic across Walnut Avenue will no longer naturally occur at the lot G crossing. Formal safe crossing must be established at several points along Walnut Avenue and unsafe crossing must be restricted. Crossing points will be established at the fire road west of the Language Center, at parking lot G, and at other points along Walnut as necessary. Crossing points will be controlled by electronic signal devices.

Optional scope of work (funding permitting) includes a pedestrian bridge from parking lot H to parking lot G; other sites may be considered.

Project Sequencing - safe pedestrian crossings must be established as the Design Technology Center is occupied.

PROJECT DEFINITION SUMMARY

L1-G

June 6, 2010

PROJECT NAME	Campus Quad
BOND PROJECT LETTER	L1-G
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$950,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Summer 2012 or Fall 2015

PROJECT DESCRIPTION

As the Measure RR program unfolds, many new facilities will be constructed to the east of the original campus core, and the reconfigured Campus begins to take shape around a large central quad bounded on the north by the Design Technology Center, on the west by the Student Services and Founders Hall facilities, on the east by the Humanities building, and to the south by the LRC/ Campus Center. This new geographic center of the campus will provide opportunities for gathering, visiting, studying, resting, contemplating, and interacting for the Campus community. Faculty and staff events will take place in this area, and the open space will balance the most densely built area of campus.

Designs for the campus quad will require input from virtually every group on campus. This process will provide an excellent opportunity to physically express many of the shared values of the community, to establish new traditions and invigorate old ones. The quad will be surrounded by main pedestrian walkways, and accessible pathways will diagonally across the open turf area. Many trees will provide shade and beauty, and landscape will be abundant. The area will be well lit and there will be ample seating with wireless connectivity available. Funds permitting, center sections may include shade structures, fixed seating, gardens, statuary, or other creative expressions of the character of Mt. San Antonio College. To ensure that this site remains undisturbed for the foreseeable future, underground utilities will be upgraded to current standards.

Project Sequencing - row building 16 must be demolished before the quad can be constructed. This area may also be required to support the construction of the new Learning Resources/ Campus Center as a construction lay down area.

PROJECT DEFINITION SUMMARY

L1-H

June 6, 2010

PROJECT NAME	Temple/Grand Intersection & Wildlife Sanctuary Improvements
BOND PROJECT LETTER	L1-H
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$1,000,000 (Intersection \$250,000/ Sanctuary \$750,000)
BOND PHASE OF WORK	
SCHEDULE	

Phase 1	Construction Spring 0210 – Summer 2010
Phase 2	Construction Spring 2011 – Summer 2011
PROJECT DESCRIPTION	The 2001 Mt. San Antonio College Environmental Impact Report identified the Temple Avenue and Grand Avenue intersection as severely inadequate to serve the City of Walnut and Mt. SAC student traffic. The City of Walnut developed several options for the improvement of the intersection, each of which required both a financial contribution and a land dedication on the part of the College. The scenario determined to be most effective resulted in an approximately 1/10 th acre land dedication from the College’s Wildlife Sanctuary. In order to ensure the continued success of the sanctuary as a teaching tool and a valued community asset, the College has set aside approximately 4 additional acres to permanently expand the sanctuary boundaries.

The expanded sanctuary provides space to mitigate other environmental impacts of the Measure RR building program, and to develop new sample ecosystems for study and enjoyment. This project will upgrade some existing structures and systems within the current sanctuary boundaries, permanently fence the new land, bring in the plant species necessary to establish the new ecosystems, and construct new features. A safe bus drop off area will be considered as part of this project.

Project Sequencing - fencing and tree species must be established early to protect wildlife and to begin the growth process so that more mature plants will be available to study and enjoy as soon as possible. Aging asbestos containing irrigation piping must be removed and replaced early with a properly sized system to support the new, larger facility.

PROJECT DEFINITION SUMMARY

L1-I

June 6, 2010

PROJECT NAME	Campus Interior Site Improvements (3 Sites)
BOND PROJECT LETTER	L1-I
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$2,700,000 (Site 1 \$650,000/ Site 2 \$650,000/ Site 3 \$900,000) Unallocated \$500,000
BOND PHASE OF WORK	
SCHEDULE	

Site 1

Construction Summer 2012 – Fall 2012

Site 2

Construction Summer 2011 – Fall 2011

Site 3

Construction: Winter 2012 – Summer 2013

PROJECT DESCRIPTION

As the various building projects are completed, it is important to make the required improvements to the adjacent sites so that the area is finished. This ensures that no further (planned) underground work will take place in the area, and surface improvements can be made knowing that the site will not further be disturbed. Interior site improvements will generally include permanent seating and gathering spaces, way-finding signage, underground utilities (power, domestic water, district heating and cooling water, fire suppression systems, irrigation water, natural gas, sewer, storm drains, data connectivity), pedestrian and emergency vehicle access, waste handling, and landscape development. The three sites are as follows:

Site 1 - Vacated Information Technology Building Site:

As the old Information Technology Building is demolished, and a new structure is built in its place, the surrounding area must be improved. This site is bounded to the south by the Learning Technology Center, to the west by the Performing Arts Center and Arts Complex, to the north by the Arts Studio (building 1A), and to the east by the Student Services building. The above listed elements will be addressed, primarily the utilities, the additional items will be evaluated with special attention to the grassy triangle adjacent to the fountain.

Site 2 -Vacated Agricultural Sciences Building:

As the old Agricultural Sciences building is renovated and the Design Technology Center project is occupied, the area previously used as construction lay-down will require attention to provide a finished space. Underground utilities in the area should not require major treatment as the adjacent building projects should have addressed that scope of work. The focus will be on pedestrian access, landscape and outdoor seating and gathering spaces.

Site 3 - Business Complex:

The Business and Computer Technology Center will be constructed on the site currently occupied by the tennis courts. The majority of the site improvement work will be included with that project, but it is important to reserve funds to ensure that pedestrian walkways, landscape, utilities and service vehicles access pathways effectively link up with the campus. A number of needs exist in the area that will be considered as part of this project. Connecting pedestrian pathways, a new entrance to the language center, and gathering spaces will be the focus.

Project Sequencing - all site work must be closely coordinated with the related building projects and other infrastructure work (fire lanes, quadrant infrastructure work, and pedestrian pathways).

PROJECT DEFINITION SUMMARY

L1-J

June 6, 2010

PROJECT NAME	Central Plant Improvements/ Energy Conservation
BOND PROJECT LETTER	L1-J
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$3,900,000 (Central Plant \$1,400,000/ Energy Conservation \$2,500,000)
BOND PHASE OF WORK	
SCHEDULE	

PROJECT DESCRIPTION

Central Plant Expansion:

Measure R project 3 included the construction of a chilled water central plant and associated underground piping to serve the major buildings on campus. In 2006, the plant was extended to include the Agricultural Sciences and Child Development center projects. In order to effectively serve the new Business and Computer Technology building, and other facilities to be constructed under Measure RR, an additional chiller and cooling tower unit must be added. The original plant design contemplated such an expansion, allowing space and future connections. The added capacity will provide the cooling capacity to operate the campus on the hottest days while adding system redundancy during normal seasons.

Energy Conservation Projects:

The College has completed three phases of energy improvement projects and operates one of the most sophisticated building energy management systems in the community college system. Further energy savings measures will ensure that Mt. San Antonio College is operating as efficiently as possible. Source reduction strategies, building metering, existing building commissioning, and additional building automation projects will be planned and implemented to leverage available incentives in accordance with the College's sustainability policies. Renewable energy systems will be evaluated and implemented as the final layer of the plan.

Project Sequencing - the Central Plant expansion must be on line and commissioned at the time construction is completed for the Business and Computer Technology Center. Energy Conservation projects must be complete by December 2011 to qualify for Public Utility Commission incentives.

PROJECT DEFINITION SUMMARY

L1-K

June 6, 2010

PROJECT NAME	Temple Avenue/Student Lot F Intersection Improvements
BOND PROJECT LETTER	L1-K
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$2,900,000
BOND PHASE OF WORK	
SCHEDULE	Construction: Summer 2015 – Winter 2016

PROJECT DESCRIPTION

Student parking lot F currently has capacity for 750 vehicles. The lot does not function efficiently as there is only one viable exit and entrance. Wait times to exit the lot exceed 30 minutes at peak times thus making it an unattractive place to park. A signalized exit/entrance onto Temple Avenue will be created to alleviate this problem. Additionally, the entrance to the Hilmer Lodge Stadium and future site of the Heritage Hall facility currently requires an unsafe left turn across traffic. This intersection will establish dedicated left turn lanes in both directions, a deceleration lane and dedicated right turn lane into student parking lot F, from westbound Temple, and dedicated left and right turn lanes exiting the parking lot onto Temple Avenue. Pedestrian circulation across Temple will remain through the existing tunnel. Lighting and security measures will be added to the tunnel. Optional work will include improvements at the stadium entrance, surface improvements to the student lot, and a new landscaped frontage along the north side of Temple Avenue.

Project Sequencing - planning for this intersection must integrate with planning for the public transportation center and Heritage Hall Projects. Construction should start only after the new Parking Structure project is complete as many student parking spaces will be out of service during construction to provide contractor lay-down areas.

PROJECT DEFINITION SUMMARY

L

June 6, 2010

PROJECT NAME	East Campus main Fire Road Access
BOND PROJECT LETTER	L1-L
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$2,200,000
BOND PHASE OF WORK	
SCHEDULE	Construction: February 2011

PROJECT DESCRIPTION

As Mt. San Antonio College has grown, open space on the east side of the campus has been targeted as the site of several new buildings. The Language/Health Careers Center, Student Health Center, and Central Plant were built early in the Measure R program. The Agricultural Sciences Laboratories and the final phase of the Bonita/Walnut intersection projects are currently under construction as two of the final Measure R projects. Under Measure RR, the Business and Computer Technology building will be built on the site currently occupied by tennis courts, and the Child Development Center will be constructed just north of Walnut Avenue.

In support of these major developments, a new fire access lane suitable for heavy fire and rescue equipment will be necessary. This project will reconstruct the temporary asphalt roadway west of the Language Center, add a new access road connecting the Language Center access road with student lot G to the west, and provide compliant fire equipment access to the Central Plant, the east side of the Humanities buildings, and to existing facilities just south of the main walkway that extends to the west of the pedestrian bridge. As funds permit, this project will also address the need for a pedestrian entrance on the west side of the Language Center, create a pedestrian pathway from student parking lot H to the buildings south of Walnut Avenue, and solve vehicle circulation problems around the Student Health Center.

Project Sequencing - planning for this work must be done in conjunction with the Business and Computer Technology building and related site improvements, the Walnut Drive/parking lot G intersection signalization work (project L1-F) , and the pedestrian corridor planned to extend to the east from the Humanities pedestrian access bridge. The tennis courts must also be relocated prior to construction.

PROJECT DEFINITION SUMMARY

L1-M

June 6, 2010

PROJECT NAME	Reclaimed Water System & Well Rehabilitation
BOND PROJECT LETTER	L1-M
PROJECT BUDGET – STATE BOND	\$
PROJECT BUDGET – LOCAL BOND	\$
PROJECT D BUDGET TOTAL	\$1,000,000
BOND PHASE OF WORK	
SCHEDULE	

PROJECT DESCRIPTION

Consistent with Mt. San Antonio College's commitment to resource conservation and stewardship, the College has conducted a detailed engineering study to determine the feasibility of implementing reclaimed water and reactivating several ground water wells that historically provided clean water for irrigation on the college farm. This study, conducted in 2006, recommends the use of reclaimed water from any of several potential sources for use in irrigating the sports fields south of Temple Avenue, the golf driving range, and several pastures to be used for livestock grazing. The study also recommends utilizing the ground water wells for irrigating the Wildlife Sanctuary. Funds identified for this project may best be used to leverage water conservation incentive funds available from local and state sources. The planned reclaimed water system includes storage facilities, a high capacity main feeder, and distribution and metering infrastructure. The ground water well rehabilitation will include upgrading two wells to serve the sanctuary and the conversion of one well into an observation well. It is estimated that this project will reduce the consumption of domestic water by a minimum of 20%.

Project Sequencing - planning for this work should begin as soon as Bond funds are available. Construction will depend upon the timeline for incentive funds.

SPACE PROJECTIONS

Mt SAC Credit Academic Programs

In 2008 the District employed a consultant, Dr. Grace Nitchell with Professional Personnel Leasing, Inc. to work with the Institutional Effectiveness Committee to develop an Educational Master Plan. This project was completed and the final document, the 2008-2009 Educational Master Plan was accepted by the Board of Trustees. The Educational Master Plan (EMP) provided much of the information necessary to complete a revised Facilities Master Plan for the District. As part of the overall Facilities Master Planning effort, a critical piece of the project was to evaluate the 2008-2009 Educational Master Plan and convert the projected WSCH into appropriate teaching and support facilities space needs. It was necessary to recalculate the weekly student contact hours (WSCH), the process progressed. In addition to calculating projected WSCH into assignable square feet (ASF), those planning projects identified in the Five Year Capital Construction Plan were integrated into all forecasted teaching space needs. Overall, in most cases with the number of projects and new structures identified in the planning cycle most of the identified academic and instructional deficiencies were addressed. The exceptions have been noted and highlighted for action.

Phase One:

A planning model was created to address the College’s capacity for future growth. The model took into account two vastly different projected growth rates found in the 2008-2009 Educational Master Plan. The more modest growth projection was adopted for this analysis. The result was an overall 2.2% growth in WSCH for the 13 year period covered by the analysis.

- 2007-2010 = 1.42%
- 2010-2015 = 2.08%
- 2015-2020 = 2.30 %

Due to some inconsistencies in the original data it became necessary to reevaluate the base data from 2007. This recalculation and assessment resulted in a lower total growth projection for the academic programs. With these factors taken into consideration, WSCH generated for the credit academic program (on a semester basis), has been projected to increase from 343,170 WSCH in the base year (2007) to 441,975 ASF by 2020.

It is anticipated that in time there will be adjustments to curricular content, new courses and programs introduced, and a significant increase in basic skills programming that supports student success efforts. While basic skills programs may increase disproportionately based on student body needs, those disciplines that currently command the greatest percentage share of the curriculum and produce the greatest percentage of WSCH are projected to maintain their position in the future.

Program of Instruction: Key Characteristics

The key characteristics of the current program of instruction are noted in the table that follows. The features include the number of sections, the total Weekly Student Contact Hours (WSCH), the WSCH per section, and the Full Time Equivalent Students (FTES) generated. The Fall 2007 semester was used as the baseline producing a snapshot in time.

Table 1: BASELINE SUMMARY

Division	Sec	WSCH	WSCH/Sec	FTES
Art	233	27,468	117.8	837.1
Business	347	39,348	113.4	1,199.2

Student Services	49	3,180	64.9	96.9
TOTAL	2,760	343,170	124.3	10,459

The detail and comprehensive breakdown by discipline and program can be found in Attachment A in this Appendix B.

Table 2. Profile for the Future Capacity to Generate WSCH by Program of Instruction

It should be noted that the projections for the future program of instruction are not intended as parameters for the curriculum content and/or actual numbers of sections to be offered in a term but rather to provide a perspective of what the current curriculum would look like if extended forward. Whatever the future curriculum becomes the need for space would still be governed by specified amounts of lecture and laboratory space.

Table 2 represents a summary of the projected WSCH capacity for the future program of instruction by Division. While the forecast is presented in summary form, the actual process was conducted at the discipline/program level. A comprehensive analysis by discipline/program can be found in Attachment A in this Appendix B.

Table 3. Future Space Growth Projections

Table 3 makes the jump from WSCH and projected WSCH to space and the facilities necessary to produce that WSCH. Starting with the 2008-2009 Educational Master Plan, spaces and the capacity to predict space needs for the program of instruction was the primary focus. The scope included a balance between what current space each program occupied, the projected need for programmatic space into the future, and then weaving all this into the state standards for instructional facilities found in Title 5 regulation.

For the purpose of this plan a factor of 20 assignable square feet (ASF) per student station was used to estimate lecture classroom space need. While the state standard for lecture space is currently 15 ASF per student station, this number has proved to be inadequate for both construction and instructional purposes. Due to modern classroom furniture types, technology considerations and classroom orientation, the more appropriate calculation is between 18 to 20 ASF.

Table 3 depicts projected space needs for the benchmark years, 2010, 2015 and 2020. The capacity to generate WSCH was used as the key element for identifying the amount of lecture and laboratory space required to support future programs of instruction.

Table 3: FUTURE ASF / SPACE NEEDS

* Lecture ASF adjusted to 20 ft per student station

Phase Two:

The scope of the assessment involved a review of the projects that have been planned and/or proposed for construction and/or remodeling. The objectives were to:

- Identify the key elements in each project and associate them with the discipline/department needs.
- Assist the District in its decision making process relative to a building/facilities program.

A review of these projects and planning documents was conducted and assessed for their impact on the current space utilization. As a result, these new constructions and/or proposed remodeling projects have been included in the overall instructional/discipline analysis. Their impact has been integrated into the estimate of overall instructional space needs and included as part of the overall academic facilities;

- Agriculture Science Complex
- Design & Online Tech Center
- Child Development Center
- Business & Computer Technology Center
- New Physical Education Complex
- Technology Building Renovation
- Fire Academy

ADJUSTED CREDIT SPACE PROJECTIONS (Five Divisions Only)

Project Impact on Divisions

1.1 Arts Division:

The Arts Division currently has a total of 51,456 ASF and 37 classrooms. With the completion of the proposed Design & Online Technology Project (focused on the disciplines of Design, Animation and Graphics), the Arts Division will have a total 66,816 ASF and 52 classrooms. By 2020 it is estimated that this division should have a minimum of 36 instructional teaching locations. This addition should meet the division's instructional space needs for 2020.

1.2 Business Division:

The Business Division currently has a total of 31,326 ASF and 30 classrooms (14 lecture and 16 laboratories). By 2020 it is estimated the division should have at least 48,557 ASF and 47 classrooms to meet their scheduling needs, an estimated shortage of 17 classrooms. As a division with four basic areas of primary focus: Business and CIS disciplines, Child Development, and Consumer and Family Studies attention must be placed on diverse programmatic needs for facilities. In approximately 2015 the district has plans to add a new Business and Computing Technology Center which will result in a revised total of 45 classrooms (including instructional facilities for Consumer & Family Studies). The Child Development Project will add 5 rooms to the division and with the opening of the proposed Design & Online Technology Project, eight additional classrooms will be available to Family and Consumer Studies disciplines. Therefore, by 2020 the Business Division will have a total of 62,066 ASF and 57 instructional spaces. These Additions should meet the Division's need.

1.3 Humanities & Social Sciences Division:

The Humanities Division occupies four buildings for a total of 62,524 ASF and currently has 76 classrooms (68 lecture and 9 labs). As a Division with high enrollment projections plus a significant demand for lecture type space, the division suffers to meet scheduling demands. We estimate that the Humanities Division is currently short at least 4 lecture classrooms. As enrollment demand continues, by 2020 we estimate this division will need a total of 107 classrooms. This will result in a shortage of approximately 30 lecture type facilities. Planning for the future must therefore focus on a number of options. One option might be to remodel the old LRC vacated space for general classrooms use and/or the other option will be to consider a new "general purpose classroom building".

1.4 Natural Sciences Division:

The Natural Sciences Division is more easily addressed as three programmatic segments: the Agricultural disciplines, Physical and Life Sciences, and Mathematics. Overall the division has 120,379 ASF and 93 classrooms (49 Lecture and 44 laboratories). While the estimated need for ASF in 2020 is 128,024 and 92 classrooms, there remains some disproportional distribution of classroom spaces and some program areas that may require individual attention. With the addition of the new Agricultural Science Complex, the Agricultural programs will have sufficient space to meet their growth needs. In addition, this new space will bring the division total ASF to 132,036 and 96 classrooms. The Mathematics program has a total of 30 classrooms, but an overall need for a minimum of 32-33 rooms. While the Physical & Life Sciences has a total of 53 classrooms in 2020, the Life Sciences projects a need for 28 classrooms, but only 19 are available in the current distribution of facility space. By 2020, Mathematics will need an additional 3 classrooms and Life Sciences will need 9 lecture/ laboratory facilities.

1.5 Technology & Health Division:

Technology and Health Division currently has 105,591 ASF and 62 classrooms (27 lecture and 35 laboratories). While the estimated need for this division in 2020 is 100,243 ASF, below what they currently have, they will continue to need instructional space...at least 83 classrooms. Proposed plans for construction/reconstruction include a Technology Building Renovation (Bldgs 28A and 28B). This renovation will increase and redistribute available space to disciplines in this division. By 2020 the OCCED/CTE programs will have 38 instructional spaces (four over their need for 34 classrooms). The new Fire Academy Project will address the needs of this program with a planned new facility and an additional 5,000 ASF in instructional space. This division also benefits from the Design & Online Technology Center in added instructional spaces. The Health programs indicate a 2020 need for instructional space of 40 classrooms. By 2020 the Division will have 122,810 ASF and 76 classrooms, a shortage of 7 Instructional facilities.

1.6 Physical Education:

While the state does not provide any special assessment for Physical Education “labs” it does allocate a “seat capacity” and therefore space can be estimated for these programs. The proposed New Physical Education Complex facility allocations are well under what the discipline provides in Weekly Student Contact Hours/FTES. The project includes two gymnasiums, plus 12 additional instructional spaces. This appears adequate for 2020

* Classroom space needs focus directly on lecture and laboratory facilities and do not include support space and/or service areas to these programs.

Continuing Education / Non-Credit

The Continuing Education Non-Credit Programs were not addressed in the same manner as the credit programs received in the 2008-2009 Educational Master Plan. The overall assessment of the program was based primarily on:

- Costs versus income
- Census reports on enrollments and sections
- Fiscal impact of non-credit faculty.

The Continuing Education/Non-Credit program offers non-credit educational opportunities to the community’s older adult population, limited occupational certificates, non-credit English as a Second Language and High School programs for minors as well as adults completing valuable High School credentials. In addition, under the umbrella of Continuing Education are a number of non-credit graded laboratories that support credit students and are operated within the departments in which they reside.

Table 4: Profile for the Future Capacity of the Continuing Education Program to generate WSCH.

Continuing Education is a very viable program that generates a significant amount of WSCH to Mt. San Antonio College. Table 4 addresses this WSCH and its anticipated growth to the year 2020. A comprehensive analysis of function can be found in Attachment C in this Appendix B.

The Continuing Education services are currently housed in three closely related facility complexes on the Mt SAC campus. For the purposes of a Facilities Master Plan, the Continuing Education/Non-Credit Program can be divided into at least five categories of service to the College and to the Community:

1. Continuing Education Older Adult Program which is basically housed in facilities in off-campus locations and provides opportunities for seniors.
2. Vocational Education Program where non-credit students participate along with credit students in occupational courses offered throughout the college.
3. On-campus orientation, counseling for adjunct / basic skills and guidance, learning assistance, assessment and tutoring programs serving non-credit students.
4. Laboratory offerings are listed under the auspices of Continuing Education but operated with credit departments and utilized by credit students.
5. On-campus programs including English as a Second Language, the High School Referral Program and the High School Adult Diploma Program.

The Continuing Education services are currently housed in three closely related facility complexes on the Mt SAC campus. For the purposes of a Facilities Master Plan, the Continuing Education/Non-Credit Program can be divided into at least five categories of service to the College and to the Community addressing the need for campus facilities provided a new challenge. With the Continuing Education/ Non-Credit Program serving a variety of functions each with diverse needs for space, the process for developing a proposal for space/facilities into the future necessitated addressing a number of issues. Some programs, like the Job Training Vocational Education offerings are served by the existing credit facilities. Other functions share space with specific credit programs such as the Language Center, DSPS services and some Certified Nursing spaces. In most cases these shared facilities serve the District well in that human resource needs and fiscal costs are not duplicated. In order to address the Facility Master Plan objectives, it became necessary to extract those programs that require campus facilities and address them separately.

In order to compare curriculum from the various community colleges in the state, the State Chancellor’s Office uses a hierarchical taxonomy to code disciplines and programs into generic units known as the Taxonomy of Programs (TOP code). In the case of the majority of the Continuing Education/Non-Credit Program the standard TOP Code is 4900 (interdisciplinary studies) or one of its subcategories.

A comprehensive analysis by on-campus function can be found in Attachment D in this Appendix B.

The 2020 calculations and projected on-campus ASF is as follows:

1. Older Adult Lab	1,995 WSCH, and 3,411 ASF
2. Language Center	1,798 WSCH, and 4,621 ASF (Language Center)
3. Adult Basic Education	3,246 WSCH and 8,341 ASF
4. ESL	25,146 WSCH and 12,041 ASF
5. High School Referrals	3,973 WSCH and 6,140 ASF
6. High School Adult Diploma	3,362 WSCH and 8,136 ASF
7. Health Careers	1,023 WSCH and 2,189 ASF
Totaling	44,879 ASF

Table 5: Future Proposed On-Campus ASF and Space Needs for the Continuing Education Program.

Table 5 compares the current on-campus/non-credit facilities to future space needs for these programs. These space categories evaluate only those programs that require campus facilities to serve the programs in question. Programs meeting at off-campus locations or those Vocational Education programs meeting along with credit enrollments were not included in the ASF forecast. A comprehensive analysis can be found Attachment D in the Appendix B of this plan.
